

GROWTH

Our company practices active and consistent environmental and energy protection – Sustainability in construction projects and construction-related services. We reduce the environmental impact by integral consideration of the entire value-added chain of our construction-, real estate-, and infrastructure projects-- including planning, performance, operation, and maintenance. Thus we are also reducing the burden on our customers' budgets. Keywords: preventive measures, energy saving solutions for new construction, renovation, modern building facilities, integration of photovoltaic- and solar heat facilities, materials management in consideration of resources as well as ecologically sensitive waste management with a high recycling rate. The management, employees, and suppliers are integrated in the implementation and improvement of the environmental and energy protection measures and process. SKE continually strives to improve the eco-balance for the properties and facilities built and maintained by us.
